

Industry Qualifications

National and Scottish Vocational Qualifications

Supply Chain Management

NVQs (SVQs in Scotland) are practical work-based qualifications that are recognised by employers and colleges throughout the UK. They are awarded to people who have proved their skill, knowledge and understanding of all aspects of their job. This means these qualifications will demonstrate that an employee is occupationally competent in their job role. A range of S/NVQs have been developed in order to meet the current and future skill demands of the Logistics sector.

The qualification – Supply Chain Management

The qualification is available at four levels and is aimed at personnel who are involved in the process of planning, implementing and controlling the operations of the supply chain as efficiently as possible. Supply Chain Management spans all movement and storage of raw materials, work-in-process inventory, and finished goods from point-of-origin to point-of consumption. A full list of units is shown overleaf.

The Level 2 Qualification is for those in roles such as a supply chain coordinator. The employee must demonstrate a sufficient level of competence to complete 2 mandatory units plus 3 out of 9 optional units. The units include obtaining information on the supply chain and contributing to operational relationships. Also covered are the technical competences required when managing a supply chain.

The Level 3 Qualification is for employees who work in a supply chain management role that includes supervisory responsibilities. It builds upon the competences demonstrated in the level 2 qualification. Employees must complete 3 mandatory units plus 6 out of 17 optional units to gain the award. The units include analysing information on the supply chain and maintaining operational relationships. Also covered are the technical competences required when managing a supply chain.

The Level 4 and 5 Qualifications are for employees who are responsible for a supply chain operation and are managing both people and processes. They would also have some financial and strategic responsibility within their organisation. Employees must complete 5 mandatory units plus 5 out of 26 optional units to gain the Level 4 award and 4 mandatory units plus 4 optional units out of 10 to gain the Level 5 award.

Candidates at **any level** are encouraged to achieve as many units against which they can demonstrate competence and not just the minimum required for a full award.

Level 2

Mandatory units

- Contribute to operational relationships within the supply chain
- Obtain information on the supply chain

Optional units – select 3 units
